Baler

BEW BALER

The BEW BALER is used in binders and balers to tie a knot in string or wire won't to 'bind' or 'tie' the sheaves of corn or straw and hay up. The knotter works by a series of cams and gears to feed a loop of string or wire and around the bale or sheath then twist it and form the knot before a knife cuts off the string and therefore the bale is ejected and the string threaded down ready for the subsequent cycle. The whole sequence is driven by gears or chain drive as each operation must be in synchronization with subsequent.
