

Paddy Straw Chopper

Paddy Straw Chopper - Manufacturers, Exporters and Distributors

BEW India is the manufacturer of high-tech farming equipment to help farmers cope with the contemporary farming problems and guarantee good health of the field in the long-term perspective. Our Paddy Straw Chopper is one of our most reliable and high-demand solutions, built specifically to help farmers handle large amounts of post-harvest residue quickly, safely, and efficiently. Having high performance and durability as the key features, this machine is designed to suit both small and large-scale farmers that seek a reliable machine to clear the residue. With the use of chopped paddy stalks are shred and converted into small pieces and spread over the field which later mixes into the soil of field it becomes organic fertilizer which is very useful for soil.

Heavy chassis, a unique designed straw Outlet for easy flow of straw, Heavy P.T.O lack, easily drawable Straw grain storage tray, Heavy Transmission Gear, Stone trip to prevent stone entry, Backlight provided for night operation and last but not the least a perfect Computer Balanced Machine as all the rotatory parts balanced independently.

BEW India: Best Paddy Straw Chopper Built For or Powerful, Consistent Performance

Bhagwan Engineering Works (BEW) India has a reputation of producing high quality and strong implements that have given it its results in season after season. Our Paddy Straw Chopper is developed using precision-engineered components that can withstand challenging straw conditions and continuous field operations. The rotor system is reinforced, which also makes the machine stable even when cutting through uneven ground as the machine has a heavy-duty frame to support it.

All the details of this model are made with the convenience of farmers in mind. The machine is designed in such a manner that it minimizes downtime and maximize productivity through the efficient transmission system and the strategic locations of the access points to carry out service and maintenance. Due to the high quality standards of BEW India, every machine will pass through several tests to guarantee the best performance in the field. You might be thinking about what the specialties of our company are. So, clearing your doubt, below are some of the features:

The durability of our machines is very high.

Our equipment can bear wear and tear for a comparatively more extended period than any other company's agricultural equipment.

Our machines are designed keeping in mind all the factors like soil, terrain, type of crop, etc.

BEW India Paddy Straw Chopper is the top-selling machine. We have become the best Paddy Chopper suppliers in India due to the features mentioned above.

BEW is the Leading Paddy Chopper Manufacturers in India (Economical Straw Chopping and even Distribution.)

Our paddy chopping machines are in great demand in India as well as foreign countries. Talking of India, we are the largest Paddy Straw Chopper manufacturers in Punjab, famous for farming across the country. Our Paddy Chopper can chop residues like straws of paddy with ease. The chassis attached to our Paddy Choppers is massive, and it contains a uniquely designed straw outlet to move the rubble out.

BEW has proved itself to be the best agricultural equipment supplier by keeping the promises we make regarding our

machines. This is why India's agricultural state, "Punjab" always chooses us to supply machines. This has made us one of the leading Paddy Chopper suppliers in Punjab.

After harvesting, farmers usually have problem of thick paddy residues, which they are left with. The BEW India Paddy Straw Chopper addresses this by cutting the straw into fine pieces and spreading it uniformly across the field. This degree of accuracy assists the residue to break down quicker and increases the soil structure with time. The wide intake of the machine will enable the machine to collect the residue as much as possible in single pass thus reducing the time that would be used to clean the field. At the same time, airflow and discharge design aids in even distribution of the material that was chopped into tiny pieces so that it settles mildly on the soil surface. This layer of natural mulch retains water, slows the growth of weeds and is beneficial to the health of the soil.

Features of BEW India Paddy Straw Chopper

KS Paddy Straw Chopper price is the essential feature. We have kept our machines' prices low so that even a medium farmer can afford the machines rather than compromising with his needs. KS Paddy Chopper is the most satisfying machine that will never let you feel down and compromise productivity and ease of farming. Our chopper has two categories of blades - nineteen and twenty. The maintenance box is designed with the newest technology. The box is foldable, due to which it is easy to maintain the system.

Other features include big clutch plates, cutter gear for grain separation, free tool kit, free spare part kit with the harvest, a computerized method of controlling the rotating parts, double-padded hydraulic brakes, and the power source is a tractor of 55 Hp or above.

Durable Build for Long Field Hours

Degree of durability is a major concern at BEW India. This is the reason why the machine is built with a rough steel frame and a strong gear box that allows continuous chopping. The rotor is balanced to the maximum to minimize vibration and increase the life of the machine. It has a protective tray that will not allow stones or debris to get into the machine and damage the internal parts. The blades of the machine are of high grade steel to give it long life and cut cleanly even when huge amount of residue is present. This reliable design will ensure that the machine is able to deal with long working hours with no loss of performance.

Designed for Multi-Crop Use

Although paddy residue is the first application, BEW India model can also utilise other crop stalks since it is versatile. It can be used by farmers in wheat stubble, pulse residues, and the like that they may have after harvesting. This versatile utility ensures that it is a good investment in farms that crop on a regular basis. The fact that it is compatible with the usual tractor horsepower categories also implies that the farmers do not have to use other machines. The machine links in a seamless way and is simple to use, as it is appropriate to different types of fields, and soil.

A sustainable, Cleaner Agricultural Practice.

BEW India is a firm believer in sustainable farming and this machine is an important part of this mission. Farmers may opt to use a healthier alternative instead of burning residue that harms soils and negatively impacts the quality of air by using chopped straw as part of the land. This, in the long run, improves the fertility of soil, improves biological activity and makes it less dependent on chemical fertilizers. This environmentally sustainable model is also useful in ensuring long term field-productivity. The mulch layer formed following the chopping assures enhanced moisture retention, enhanced soil aeration as well as healthy root development in the subsequent crop cycle.

Convenient, Simple To Use

Considering the convenience of the farmers, the machine is designed with height adjustment, easy access to the service points, and easy maneuverability. Some of them have hydraulic braking systems that offer an enhanced control when moving or turning. The robust but convenient structure also makes sure that farmers can use the machine with ease without having to possess a lot of technical expertise. The maintenance box is well planned and parts are readily available, which also minimizes the time of servicing. This consideration of the ease of users is one of the reasons why BEW India machines are relied upon in farming circles.

Effective, High Quality, and Prudent.

BEW India makes sure that all machines we are selling provide high quality and value to their respective price. While the Paddy Straw Chopper Price varies based on model and requirements, farmers appreciate that our equipment brings long-term savings by reducing manual labor, lowering field preparation costs, and boosting soil fertility naturally. Due to the good after sales services provided by BEW India, availability of the spare parts, and customer service, the farmers can use their machines without any fear of failure after years of use. Our brand of producing reliable farm products

makes us a firm of choice in various farm belts.
BEW India Trusted Paddy Straw Chopping Technology.
BEW India is the solution that farmers can rely on when they need reliable machinery that is strong, performs, and is sustainable. The Paddy Straw Chopper Machine is engineered to work in tough field conditions and deliver consistent results without compromising on durability. It is the best option to consider when one needs fields that are cleaner, soils which are healthier and less complicated in their residue management procedure. Its effective design also makes it comparable to any premium Paddy Chopper Machine used in commercial agriculture today, giving farmers the confidence that they are investing in reliable technology supported by a well-established manufacturer.

Paddy Straw Chopper Machine Special Feature

Single sheet tail cover.
Folding elevator box for easy maintenance.
Sheet channel type light weight reel.
Double paddle hydraulic brake for easy turning.
Specially designed cutterbar can harvest fallen crop.
For safety side cover provided.
Powered by Ashok Leyland.
Heavy duty gear with 1312 big clutch plates.
Cutter gear for better grain separation.
Safe straw walker for better grain separation.
Safe & decorate operator cabin.
Manufactured with the help of KS Agrotech Private Limited. (An ISO-9001:2008 Certified Unit).
Free tool and spare part kit with harvest.
All rotating parts balanced by computerised balancing machine.
Registration (R.C. copy) and Bank Loan facility.
Subsidy & Finance Available*
